Re: **Millbury - Stormwater Permit Compliance – Drainage Investigations**

The Town is currently subject to a permit issued by the Environmental Protection Agency, which regulates stormwater discharges from the Town's municipal storm drain system. The purpose of the Permit is to reduce stormwater pollution and improve water quality in our water resources – our lakes, rivers, brooks, streams, ponds, and wetlands. The permit requires the Town to inspect and sample the Town's drainage structures, which discharge to these receiving waters.

The Town's engineering consultant, Weston & Sampson, and their subconsultant, Peer Consultants, will be sampling outfalls, drain manholes and catch basins during dry and wet weather periods from April 1<sup>st</sup> through June 30<sup>th</sup>. The work will be performed Monday through Friday, between 7:00 a.m. and 4:00 p.m.

The crew performing the work will have proper identification and will be wearing bright shirts or vests. Work will be conducted throughout Millbury. If access is needed to a drainage structure located on private property, crews will knock prior to the inspection. If there is no answer from the property owner, a notice will be left confirming that the crew was there and performed the required inspection, and no further action is needed on the part of the owner.

For further information, please contact Andy Gaughan (Weston & Sampson Engineers) at 978-516-8969.
